Hydron-Aire Ltd. 25 Maindu Bay, Grande Pointe, Manitoba

# EVi Air to Water Heat Pump provides a high efficiency solution at a reasonable cost

The Hydron-Aire EVi Air to Water Heat Pump uses innovative hydronic technology to supply energy to your home including:

- Both heating and cooling, no need for a separate air conditioning unit
- Radiant floor heating and cooling
- Domestic hot water

EVi Air to Water Heat Pumps are the most efficient air source solution on the market today – approximately

3 to 4 times greater thermal efficiency than natural gas. Additionally, EVi's record-breaking low operating ambient temperature range (down to -30 degrees C) means less reliance on all electric and gas back up sources.

**PLUS** Wi-Fi enabled controls and thermostats allow you to monitor and adjust the system from anywhere.

**Hydron-Aire EVi Air to Water Heat Pumps can provide the solution for your retro-fit or new high efficiency comfort system.**

**Make the green choice!  
EVi is the answer to:**

- **RIISING ENERGY COSTS**  
EVi captures energy from air saving up to 40% when compared with traditional heating/cooling systems
- **RELIANCE ON FOSSIL FUELS:**  
EVi eliminates the need for fossil fuels
- **UNSTABLE TEMPERATURES**  
with variable speed technology EVi heat pumps run at more consistent intervals eliminating uneven temperatures throughout the space while also providing increased air filtration
